To Whom It May Concern:

There is already too much glyphosate in our environment. Based on current research, it's found throughout the US in our water, soil, on both GM crops and many nonGM crops, and even in adults, children and breast milk. We already know that when it comes to glyphosate, there is risk. A recent Newsweek article stated that about 300 million pounds of glyphosate are applied each year! We're talking about poison here.

I want **no more exposure** to glyphosate - zero exposure. This is a non negotiable issue that affects our health and well-being.

Sincerely,

Mary Chieffe
